MedSelect: Your Path to Health - We Have the Experts for You

MedSelect GmbH is dedicated to people and their individual health journeys. Our goal is to help those who have endured long periods of suffering, who suffer in silence, and whose symptoms have only been treated symptomatically so far. A network of private medical practices, alternative practitioners, and laboratories aims to show these individuals a path to rediscover themselves or return to life, taking both curative and preventive measures to combat illness.

Holistic Diagnostics and Therapy – The Holobiome Concept

To accurately identify deficiencies, inflammations, environmental toxins, and other health factors, highly specific laboratory analyses are conducted. These analyses serve to pinpoint the causes of the symptoms and provide a precise assessment of the patient's current health status. The insights gained from these results form the foundation for a therapy aimed at eliminating these causes and sustainably improving health. The core therapy is Toxopheresis – a blood cleansing procedure designed to remove environmental toxins (poisons, antibodies, etc.) that your body cannot eliminate on its own.

We are especially pleased when patients share their improvements with us. It is also important to us that these improvements are objectively documented by our medical partners. For this reason, we place great value on follow-up checks of initially concerning lab parameters. In the course of follow-up, we monitor only the relevant parameters based on the patient's symptoms, carefully documenting the changes and progress made. This ensures the safety of both the patient and the doctor and allows for the early detection of any remaining risks, even when a patient feels well, enabling further therapy when necessary.

Our treatments are always intended as a combination of addressing current symptoms and preventing future health issues.

For Patients with Unclear or Chronic Conditions

Our services are especially aimed at patients with chronic diseases, metabolic disorders, autoimmune conditions, and illnesses of unclear origin. "We want to show patients what is possible and help doctors connect with one another and share knowledge," explains Wiebke Husung, Managing Director of MedSelect GmbH. At the heart of our approach is the innovative Toxopheresis, a gentle blood purification process using a double-filtration method. Additionally, Chelation Therapy is offered to support the body in removing toxic metals. Other therapeutic methods, such as autologous blood serum therapy and cell therapy, stimulate the healing of damaged or diseased cells. The Frequency-Chip Therapy aims to improve health through the application of electromagnetic frequencies.

Long-Term Changes for Chronically Ill Patients

"My wish is to make a long-term impact," says Wiebke Husung. MedSelect emphasizes that the path to improvement for chronically ill patients is not a sprint, but a marathon. We want to help ensure that patients who have long suffered can finally find the right opportunities and have suitable partners for holistic therapy at their side.

Prevention

Chronic illnesses arise from environmental toxins, deficiencies, inflammations, environmental burdens, and many other factors that continuously challenge our bodies. To prevent the onset of diseases, Toxopheresis is an excellent method. During the process, toxins, inflammatory substances, heavy metals, and other harmful substances are filtered from the blood, and the purified blood is then returned to the body.

Therapy Methods Explained Briefly

Chelation Therapy:

- Reduces toxic metals using chelators like EDTA, DMSA, DMPS
- Reduces free radicals
- Improves enzyme functions, protein folding, circulation, immune defense, and more

Toxopheresis:

- Blood cleansing to remove environmental toxins, etc.
- Works without chelators, reducing a variety of environmental toxins (dyes, paints, coatings, pesticides, solvents, plasticizers, silicones, combustion residues, spike proteins, car exhaust, PFAS, microplastics, etc.)
- Reduces autoimmune antibodies and circulating immune complexes
- Lowers inflammatory markers, viral load, Borrelia, bacteria, and fungal toxins
- Can seal the blood-brain barrier and improve energy production (ATP) and blood flow (rheology)
- Is gentle, well-tolerated, and serves as both therapy and prevention

Autologous Blood Serum - Cell Therapy:

- Fast rehabilitation after injuries or surgeries
- Expanded applications: skin care, eye treatments
- Simple procedure: Maximum adaptability and versatility
- Self-healing through platelets

Frequency-Chip Therapy:

- Part of regenerative medicine
- Protection from external influences
- Controlled, long-term frequency release (minimum of 6 months)
- Applied directly to the problem area or systemic positions
- Chemical-free and without side effects
- Easily integrates into daily life (sports, office, leisure, travel)
- Continuous, gentle frequency release after application

MedSelect GmbH

"We evaluate cases of various chronic conditions such as Long Covid, chronic fatigue, rheumatism, and autoimmune diseases, and observe which values and symptoms have been improved through Toxopheresis," says Wiebke Husung of MedSelect GmbH. Since its founding in July 2022, MedSelect has continually expanded and now works with both national and international partners. MedSelect is actively seeking new medical partners interested in cross-disciplinary exchange to conduct holistic research on the causes of patient conditions.
